

unison SUPERMICRO

The problem with most PCs is they are generally single-user, single-tasking, floppy based machines. You can't add another user with access to the same data at the same time - and you can waste a lot of time waiting for the printer to finish before you start the next job. But PCs are cheap. And that's why people buy them. Even when the job

at hand may really need a small minicomputer. UNISON supermicros bridge the price/performance gap between PCs and Minis - providing minicomputer power on a PC budget. The UNISON range of general purpose computers

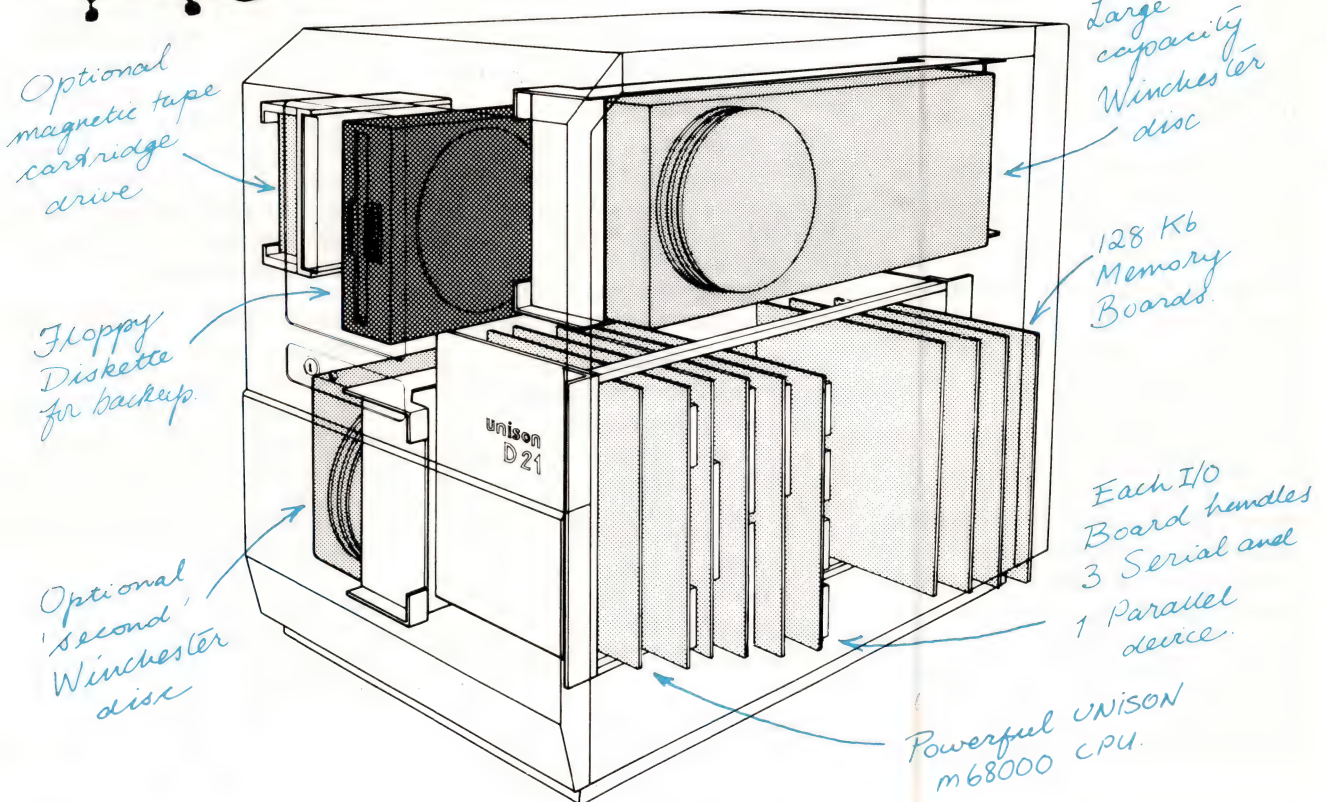

Australian computers you can build a system on.

from Email Computer Systems has the powerful 16/32-bit M68000 CPU and SIRONIX* multi-user/multi-tasking operating system. Plus UNISON has a full selection of software development tools like a Database Management System, Office Automation Environment, Spreadsheet Calculator, Forms Package, Modeller, Mainframe Communications and Languages.

And if you need more... like some mature COBOL and BASIC application modules, UNISON can offer these too.

UNISON supermicros start at around the same price as a top end PC. Interested... then contact Email Computer Systems on (03) 728 4511 or send in the coupon.

EMAIL LIMITED
COMPUTER SYSTEMS

(Inc. in N.S.W.)

Cnr. Canterbury & Liverpool Roads,
Kilsyth, Vic. 3137.

SIRONIX is an Australian product derived from UNIX System III and Version 7.
UNIX and UNIX System III are trademarks of Bell Laboratories.

Send me details for a system I can build on.
